

DHCS & CHCF Developing Health Equity Roadmap

[Health Equity](#)

04.23.24

California's Department of Health Care Services (DHCS), along with the California Health Care Foundation (CHCF), continue to make progress on their recently launched [Health Equity Roadmap](#) initiative to advance health equity among Medi-Cal enrollees and eliminate health disparities they currently face. This endeavor is an ongoing, phased process, which seeks to create a more equitable and person-centered health delivery system for California's largest public health program. What is most promising about this latest policy-driven effort is that DHCS/CHCF are directly engaging Medi-Cal members from across the state to hear their concerns and better understand what they perceive is working with the current program and what needs fixing. In addition, DHCS/CHCF are working with payors, local governments, providers, community-based organizations, and other stakeholders to help pinpoint opportunities that will clearly lead to advancing health equity among the most underserved of Medi-Cal's beneficiaries, especially BIPOC communities.
